

We Put Voice in Microsoft Teams

Better than a Calling Plan, Simpler than Direct Routing

Voice augments and extends collaboration tools including email, IM, meetings, file shares and wikis

Voice conveys emotion, intent, importance, conviction, power, direction and thought

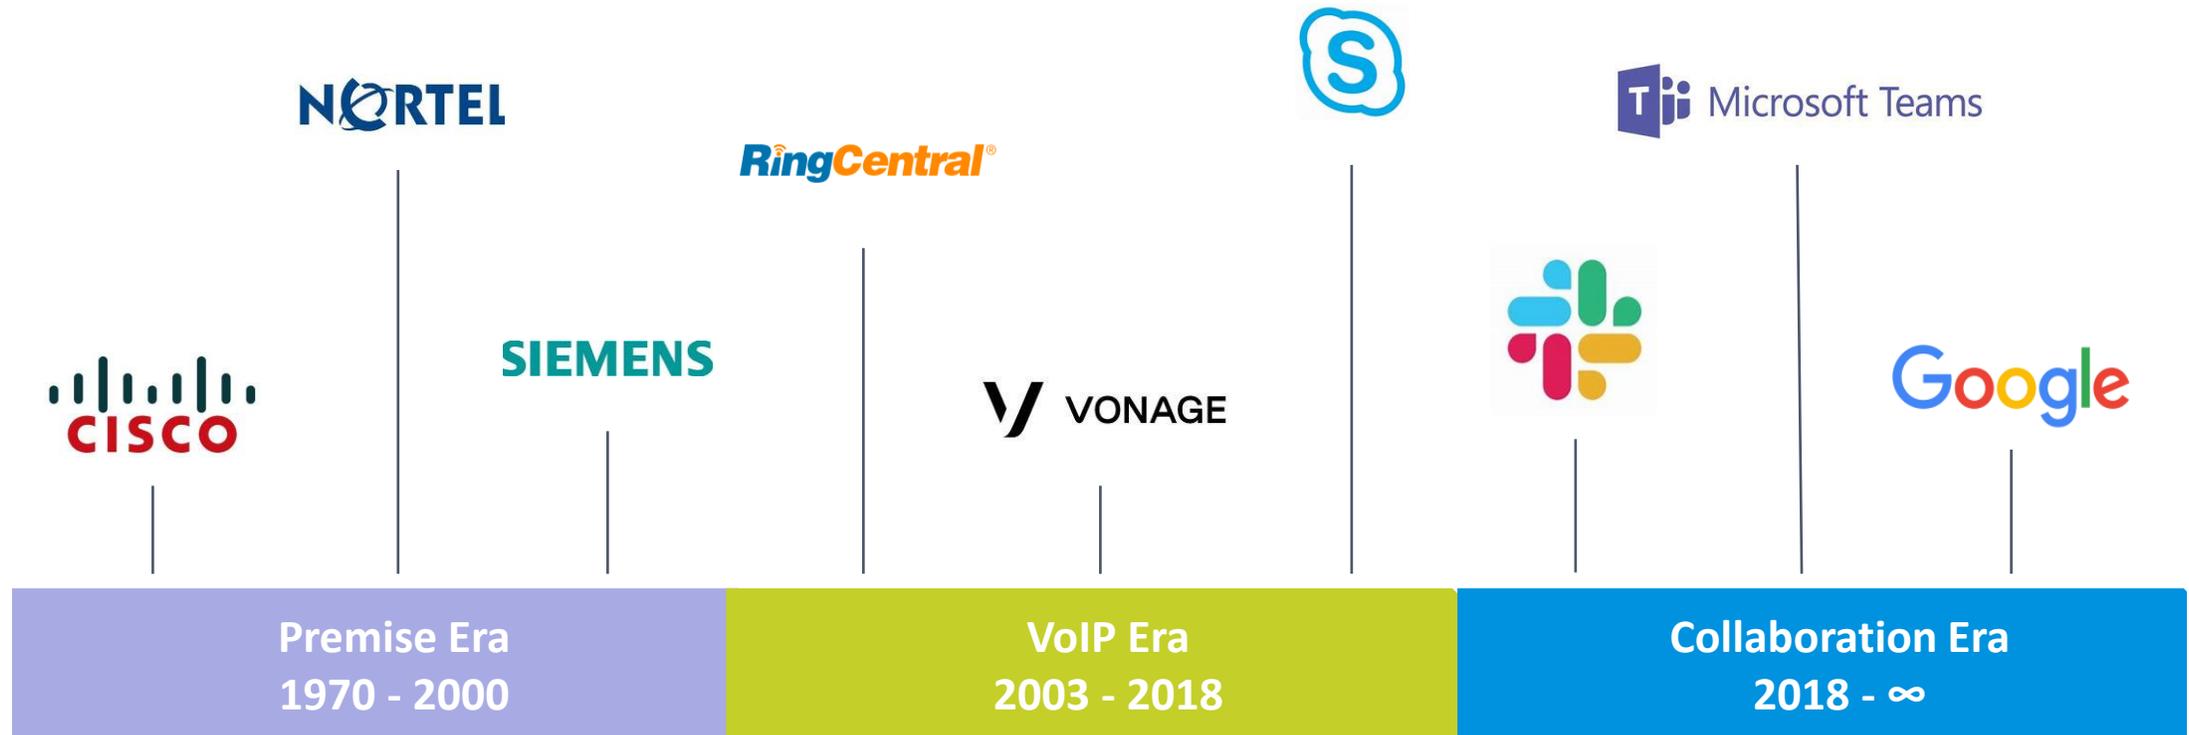

Voice is used for the exchange of ideas, to discuss, gain input, question and clarify to share

Voice is the most fundamental form of relations and collaboration between people

Voice should be simple, easy and integrated with options across all devices

“It took 50 years for traditional telcos to build and deploy 750m seats. This industry is now undergoing a paradigm shift which will migrate these users to collaboration in single digit years.” – Liam Tully Jnr, CTO, Telcom

Telcom Global PSTN

Telcom Global PSTN

- Are you seeking ease of deployment vs. building Direct Routing yourself?
- How would ability to opt in/out or up/down monthly meet your OPEX needs?
- What value would direct, single-call access to Voice Experts bring to your business?
- What are your migration plans for Microsoft Teams from traditional UCaaS or PBX?
- What are you hoping to gain from your adoption of your Microsoft Teams investment?
- Do you see value in using Microsoft Teams to activate and manage users?

About Telcom

Founded in 1999, Telcom is a privately-owned ISP and provider of unified communications, solutions.

The company specialises in business-to-business voice and data services and offers direct managed fibre services across all sectors and industries.

Telcom also provides collaboration solutions, which fuse high-quality, cost-effective voice and data services to provide a seamless user experience and increased productivity through Microsoft Teams.
